

DIGITAL CAMERA ILLUMINATOR

Gordon's Copy Stand for the Digital Age

The Digital Camera Illuminator is the ideal lighting system for all image and document processing and archiving. High quality of image is achieved through our high frequency fluorescent lighting system. With a quick flick of a switch, your operator can change from transparency to opaque processing, increasing throughput substantially. This illuminator has all the important features that you expect from a Gordon illumination system:

- Designed to use with *all* digital and analog cameras
- Color balanced, high frequency fluorescent lighting for transparencies and opaques
- Quick switch between transparency and opaque lighting systems
- Fixed camera stanchion
- *Optional (shown in picture) camera stanchion with movable carriage*
- *Specifications subject to change without notice*

Applications for the Illuminator include:

- Color and grayscale image processing and enhancement
- Document processing and enhancement
- Image and document archiving

Industry groups in which the Illuminator has applicability:

- Environmental sciences
- Medicine, dentistry, and veterinary medicine
- Aerospace industry, government, and military
- Prepress graphics
- Inspection

***Solutions to Enhance Image Quality,
Improve Workflow, and Increase Productivity***
